

$\mathcal{P}(\mathbb{X}, \mathbb{W})$

IOP verifier queries: (Q_1, \dots, Q_k)
 IOP oracle answers: $(\mathbf{a}_1, \dots, \mathbf{a}_k)$
 MT proofs: (pf_1, \dots, pf_k)
 $\pi := ((rt_i, Q_i, \mathbf{a}_i, pf_i, \tau_i))_{i \in [k]}$

 $\mathcal{V}(\mathbb{X}, \pi)$

- parse π as $((rt_i, Q_i, \mathbf{a}_i, pf_i, \tau_i))_{i \in [k]}$

- derive IOP randomness

- check MT proofs

$\bigwedge_{i \in [k]} \text{MT.Check}_{f_{\text{MT}}} (rt_i, Q_i, \mathbf{a}_i, pf_i)$

- check IOP decision

$\mathbf{V}_{\text{IOP}}^{[Q_i, \mathbf{a}_i]_{i \in [k]}} (\mathbb{X}, (\rho_1, \dots, \rho_k))$
